Digital X-Rays For Pets

The same digital x-rays that have taken over the human medical world are making their way into the animal kingdom. Environmentally friendly digital x-rays eliminate the need for x-ray film and dark room developing. Each image is stored in a computer file for easy access and storage. The veterinarian can monitor the progress of a healing bone or disease by pulling up images and comparing them side by side, a cumbersome process when working with traditional x-rays. Another benefit is that the image is of a high resolution. Pet owners can see their animal's images right on the spot, and the vet can adjust levels of light and dark in order to get the perfect shot. Our goal is to provide the very best veterinary care and compassionate service, recognizing both the needs of the client and their pet must be addressed simultaneously. We strive to create a work environment that encourages professionalism, growth and diversity. We recommend regular checkups so that we can help you monitor your pet's overall health. Bring your pet to **1055 Grass Valley Hwy.**, regularly to maintain your pet's health and happiness. Call **530.885.1919** to schedule an appointment. *Consider joining our family.*

P.S. Digital x-rays allow for adjustments while the animal is still on the table, which means fewer extra x-rays taken and less exposure to radiation for vets, assistants, and patients.
